About OKX Brokerage

OKX brokers are our key partners.

OKX has been promoting the Brokerage Scheme to provide brokers with the account management system, order management system, matching system, and settlement system.

Also, it has shared fluidity and depth throughout its network to assist brokers in promoting their businesses and earning high commissions

Who Can Join OKX Brokerage

If your platform provides cryptocurrency services, you can apply to join in the OKX Brokerage project, earning high commissions through the trading fees generated by users in OKX.

Some examples are:

- Trading aggregator platform
- Trading strategy platform
- Technical strategy provider
- Trading bot platform
- Wallet Providers
- Asset management and payment platform
- Social trading community
- Exchanges
- And many more!

Why OKX Brokerage?

- Strong revenue generator
- Full liquidity with the most diverse product varieties available as all-in-one
- Most stable platform on volatile market conditions
- Robust risk control model
- Strategy testing with historical data available
- Most professional service in the market

ND (Non-Disclosed) Brokerage

The non-disclosed brokerage model refers to the business model that brokers create accounts in OKX, and users create accounts on brokers.

With this model, each user that has created an account on the broker will create a sub-account in their OKX account, and the one-to-one correspondence will achieve separate management on their accounts.

For Broker

Brokers can use their own brand to get customers

Users have no consciousness of OKX

Brokers have an independent account system

Brokers have their own front-ends(website/app)

Main Features

- Orderbooking trading
- Convert
- Strategy Trading
- Earn

Onboarding Process

- I. The broker's onboarding qualification is approved
- II. OKX's account manager assists you to further complete the signing of your onboarding contract
- III. The broker's technical department refers to the broker's API settings for technical access
- IV. After your onboarding, the broker can test online trading, and use T+1 to query commissions, and the onboarding process is completed

Additional Service

With increasing needs from our broker partners, we have screened dozens of existing white-label crypto exchange solution providers and narrowed down to a few of them as our 3rd party partners

These partners will deliver a full package with integration to OKX brokerage program via API

Upon request, we will introduce for proposal and demo
